

## How to Administer Eye Drops

- 1 Remove any discharge around the eye with a cotton ball moistened with warm water.
- 2 Hold your cat sideways on your lap or place him on a table at a comfortable height (you may want someone to help restrain your cat if you choose the second option).
- 3 See the instructions on the bottle for dosage. Shake if necessary.
- 4 Use one hand to hold the bottle between thumb and index while using the other to support the cat's head.
- 5 Tilt the head back and, to prevent blinking, use your free fingers to hold the eyelids open.
- 6 Hold the bottle of drops close to the eye, but DON'T touch the eye's surface.
- 7 Squeeze, aiming the drops at the centre of the eye, then release the head after the drop is in the eye.
- 8 Your cat will blink, spreading the medication over the eye's surface.

## How to Apply Eye Ointment

- 1 Remove any discharge around the eye with a cotton ball moistened with warm water.
- 2 Hold your cat sideways on your lap or place him on a table at a comfortable height (you may want someone to help restrain your cat if you choose the second option).
- 3 Check the instructions on the tube for dosage.
- 4 Gently pull back upper and lower eyelids.
- 5 Hold the tube parallel to the lower eyelid, squeeze out the ointment onto the edge of the eyelid.
- 6 Release the head and let your cat blink.
- 7 If necessary massage upper and lower eyelids together to spread the medication.

**IMPORTANT:** always administer medicine to its full term for it to be 100% effective. When administering medication stay calm - your pet can sense if you are nervous making it more difficult to apply the treatment. Always praise and reward your pet with a treat.
